KTS RFID has developed a solution in the Cloud, based on RFID technology for the management (**identification, traceability**) of cleaning mops cloths in healthcare units.

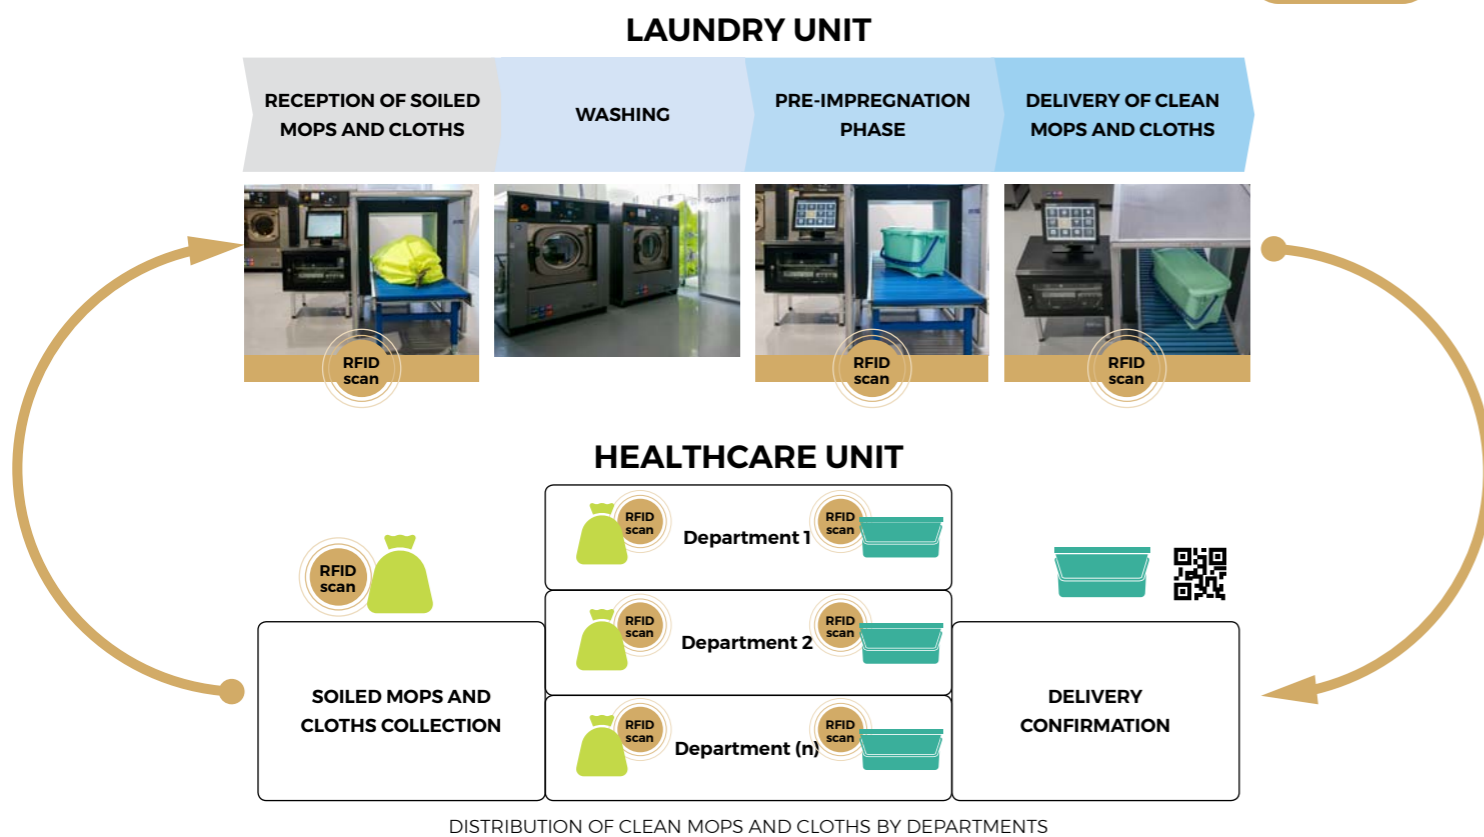

The KTS Cloud solution uniquely identifies items using original KTS RFID tags. The KTS Cloud software platform makes it possible to identify the cleaning mops and cloths by scanning them with RFID readers, as well as their location, traceability and real-time inventory. The KTS Cloud solution also stores data in the Cloud (Microsoft partnership) and provides real-time online reporting.

Initial circuit of mops and cleaning cloths

DISTRIBUTION OF CLEAN MOPS AND CLOTHS BY DEPARTMENTS

RFID-enabled mops and cleaning cloths flow

DISTRIBUTION OF CLEAN MOPS AND CLOTHS BY DEPARTMENTS

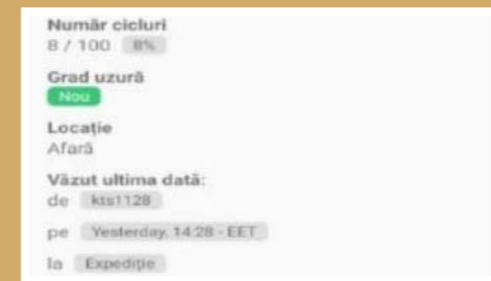

Easily monitor the valid time of action of the biocide impregnated on textiles.

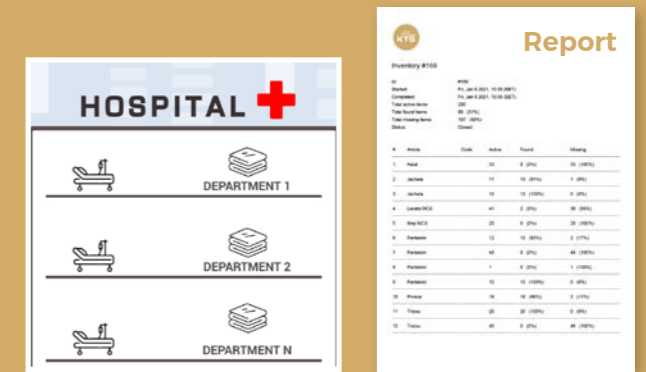

Reduce Time and Cost to Manage the medical textiles, mops and cleaning cloths.

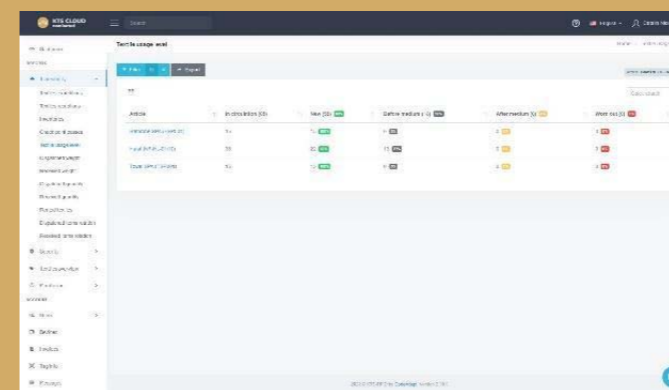

Accurate information on the items. Know their location at any time.

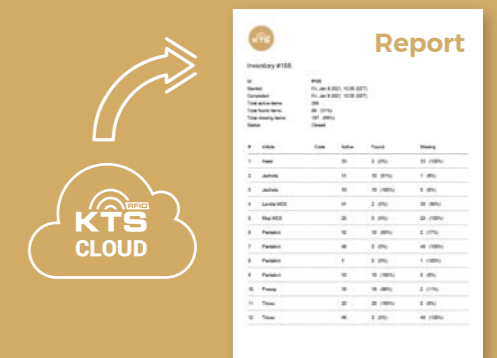

Share and deliver articles by departments.

Accurately monitor and track the items' usage level.

Real-time analytics and reports for the optimization of your business operations.

Quick installation with no major investments or IT&C knowledge needed.
